

I started off yesterday the "copy" for the Intel-
lectual Observer - containing Colours of Stars,
Solar Observations, &c. - a dullish contribution.
Next month I hope to return to the Moon. -
I have had little opportunity of using my telescope
tho' one or two nice nights. Being at Hereford
on Wednesday I had an opportunity of examining
his Optic reflector with 8 inches silver on-glass
speculum. It is a magnificent thing to look at.
There was such a vibration of heated currents that
his watch-face could not be steadily seen - but it
was plain that he had very good definition even
with about 500. - Saturn would be glorious, I
am sure. - ~~But~~ This noble instrument he
would sell for about £35. - If he were not
so engaged in schoolkeeping, under a severe dis-
