

objection unless ^{one} it may arise from the
unequal contraction ~~of the~~ expansion
of the surfaces of glass & metal cemented
together. But actual trial would best

Decide this - I am sure Mr. With will
be greatly obliged ^{as he was by your calculation} by the suggestion; and I
can but speak his great obligation for the book
you have been so very kind as to send ~~the~~
for him, which duly arrived this morn-
ing. I will take it to him on Saturday,
having to go to Hereford that day - when
I shall have an opportunity of seeing his
new $P\frac{3}{4}$ inch mirror worked to only 63
inches focus. Its spherical figure was very
fine - I do not know whether it has been
