

You would therefore be debited  
this kind of thing ---

As it is, only cleaned & the tube painted	10.0.0
New T. Lab	1.0.0
2 Eye Pieces	2.10.0
<sup>Finder</sup> Putting stand in nice working order, which I don't think Rueck can do - at least	10.0
Carriage of stand & tube p. Lugg.	10.0
(It being supposed your cousin would take up specula)	15.10.0

(The only thing deductible here is the Flat,  
which is good enough for practice & might serve  
a beginner for a long time. ~~It is~~)

Now, please recollect, all this for ~~the~~ mirrors which  
I have had no opportunity to try - & for a long time  
now. I cannot honestly advise it. Nevertheless,  
Rueck is to let me know what he will sell the  
with 6" without stand for, & then you can  
compare. But there is no hurry. I'll venture

to say, the Lenses will stay a long time where it  
is - not unlikely years - if you don't take pity  
upon it. And you can enquire what Calver's  
Equat. mounting, sans divided circles - will  
cost. And you will hear I dare say to allow  
for another eyepiece for the with - for Rueck's  
was of the fly-away order - first he said there  
were 2 low power eps. perhaps 40 & 120 (I  
believe he said) but since he told me one was a  
very deep one. And if so you w<sup>d</sup>. want a medium  
power. ---

NB. It may be recollect that With's will  
want a new film from time to time - say every 2  
years - but I quite believe the Lenses & the of that  
excellent hard white alloy that does not tarnish.  
Nevertheless its polish is so poor - & the metal so  
much less reflective - that I don't believe it w<sup>d</sup>.  
have more light than the 6" with. -

Thro' your great kindness I have brought the  
Eels to book about the Rail's. It is now  
said by the Sol. that the amount will certainly
